CHIDUBEM T. IGWE

+44 7823 701202 | chidubem.t.igwe@gmail.com | LinkedIn | GitHub | Portfolio | London, UK.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL, C#
Frameworks & Libraries: FastAPI, Django, Spring Boot, React, REST APIs
Databases & Data Stores: PostgreSQL, Redis, MongoDB, H2
Machine Learning & AI: TensorFlow, Keras, scikit-learn, spaCy, FastText, LLMs
Tools & Platforms: Docker, Kafka, AWS S3, Cloudinary, Git, GitHub Actions, Postman, Twilio WhatsApp API

EXPERIENCE

TVSM (Remote) **Jan 2025 - July 2025**
Software Engineer (Contract)

- Built a centralized **FastAPI backend** supporting member management and communication workflows for a community of **1,500+ members**, replacing fragmented manual record-management processes.
- Designed and implemented **30 backend endpoints** across authentication, member administration, events, and media, using **JWT-based administrator authentication** and bcrypt password hashing.
- Delivered **10 core backend workflows** spanning member registration, account management, event publishing, dashboard analytics, and media management, integrating **SQLAlchemy, Cloudinary, and Resend** for persistence, media storage, and automated email delivery.

BSSL Technologies, Nigeria **Aug 2024 - Jan 2025**
Mobile Developer Intern

- Contributed to an enterprise **Flutter ERP application** within a **3-engineer team**, implementing mobile features and integrating REST APIs with backend business services.
- Debugged and resolved **UI and API integration defects**, tracing frontend-backend issues and validating fixes through functional testing.

PROJECTS

Kora — Conversational Business Automation Platform [GitHub]
Technologies & Tools: Python | FastAPI | PostgreSQL | FastText | spaCy | Docker | Twilio WhatsApp API

- Engineered a conversational automation platform integrating NLP models, REST APIs, and database services to support inventory, sales, purchases, and transaction workflows.
- Developed a multi-stage NLP pipeline using FastText and spaCy for intent classification and entity extraction, achieving approximately 90% classification accuracy in internal tests.
- Reduced message-routing latency by approximately 90%, from 1.4 seconds to 150–200 milliseconds, by replacing external LLM inference with locally executed NLP models.
- Implemented automated backend service tests using Pytest and isolated test databases to validate business logic and improve reliability.

Midas Core — Event-Driven Transaction Processing System [GitHub]
JPMorgan Chase & Co. Software Engineering Virtual Experience, Forage
Technologies: Java 17 | Spring Boot | Apache Kafka | Spring Data JPA | H2 | REST APIs

- Built an **event-driven backend service** using **Java, Spring Boot, and Kafka** to asynchronously process financial transactions, validating account ownership and available balances before executing transfers.
- Implemented transaction persistence with **Spring Data JPA and H2**, maintaining account balances, transaction relationships, and timestamps across processed financial events.

EDUCATION & VOLUNTEERING

Middlesex University, London, UK **Sept 2025 - June 2026**
BSc Information Technology & Business Information Systems — **First Class Honours**
Relevant Coursework: Data Modelling, Agile Software Development, Business Planning & Strategy

Aptech Computer Education, Lagos, Nigeria **July 2022 - Dec 2024**
Advanced Diploma in Software Engineering — **Distinction**
Relevant Coursework: Data Structures & Algorithms, OOP, Database Systems, Backend Engineering, ML, DL, LLM's

Volunteer Programming Instructor: Taught **Java and C# to 15+ students**, covering OOP, application development, and hands-on programming exercises
